Keep your presentation short and Suite

InterWrite Meeting Suite comprises several presentations products from GTCO Calcomp Peripherals, all operated with Windows-based Interwrite software.

The InterWrite MeetingBoard allows the user to write notes upon and highlight key

points of a presentation, using an electric pen. The pen can also be used like a mouse to interact with the computer. Annotations can then be e-mailed to the meeting's participants.

The InterWrite MeetingPad is a wireless device that lets participants contribute to the presentation from up to 91 m (300 ft) away, including making annotations and having mouse control. It can be passed around the room or up to seven MeetingPads can all be active at the same time.

Finally, the InterWrite iPanel is a liquid crystal display (LCD) monitor that allows the user to add annotations while continuing to face his/her audience.
