Always Ready

The Modern-Day Presenter's Tool Kit

ied, readily available, easy to use and can make even the rook amateur look polished and professional. Content, well, that is another story.

The first

other discussion.

Apple makes a product called Keynote which, if you don't have the Mac-compatible version of MS Office Professional with PowerPoint already, makes for a nice alternative.

Keynote includes pre-designed themes, typography options, image resizing and animated charts similar to PowerPoint but with the ease of use Apple is known for. Keynote also imports and exports PowerPoint, QuickTime

ment on the cheap, try downloading a solution from Sun Systems called StarOffice, which some people might like better than PowerPoint.

A group of products bridging the gap between software, hardware, the presenter and the audience are digital whiteboards. If you are designing a room, upgrading an existing facility, or making a presentation to an audience in the field and need to work on the fly, add data and prove formulas to the audience, these devices are marvels of modern computing. If you are making a presentation and you need to hand-write data in a large format, or would like to have this ability on the road without having the expense and hassle of trying to rent one, then look no further than the new generation of interactive tablet

GTCO CalComp's InterWrite iPanel is an LCD monitor which enables alteration of a presentation with a mouse-like pen. InterWrite is a Microsoft Windows-based software application which can also be used at the desktop with a number of GTCO CalComp's pen-input peripherals.
