NEW PRODUCTS

Dell (<http://www.dell.com>) has announced three powerful, secure and reliable additions to its business notebook portfolio. The Latitude D410, D610 and D810 represent the next generation of D-Family notebooks incorporating the latest Intel mobile architecture with enhancements based on Dell's direct customer feedback. The new Latitude D systems now include two industry-standard security technologies: smart card readers and Trusted Platform Module (TPM 1.1). Also, the new notebooks are compatible with existing Latitude D-Family docks and accessories to preserve customers' investments in upgrades and peripherals.

Version 3.10 of InterWrite PRS software (<http://www.gtcocalcomp.com/interwriteprs.htm>), with more options for administering and reporting student results from classroom tests and quizzes, has been released by GTCO CalComp Inc. Developed using Java, InterWrite PRS is a stand-alone application built with a standards-based approach and provides cross-platform compatibility for both the Windows and MAC OSX operating environments. The new software also provides the ability to export grades to leading course management systems including Blackboard Learning System, Web Assign and WebCT. In addition, the latest software provides a variety of reports that can analyze the results for a single question session or a series of sessions in a grade book.
